OPES SOLUTIONS

The solar solution made for vehicles

A light weight solar panel that replaces parts of a cargo box or roof

www.opes-solutions.com

In a patented process, crystalline solar cells are combined with structural foam. Conventional sandwich elements of a box are replaced, adding power generation to the function of the box or the roof.
Innovative interconnection and half-cell technology ensure optimum yields also at shading and low irradiation conditions.

Add free range

Solar Power turns directly in more KM

Cut energy costs

Make the sun your charging station.

Minimize Recharges

Save time through fewer charging visits

Extend battery life

Improve the battery management

Reduce emissions

Lower the CO_2 footprint of your fleet.
